

INTRODUCING WELLVIEW ALLEZ

The world has changed, and WellView is changing with it! WellView Allez is the evolution of WellView on the Peloton Platform.

When WellView was first developed, Peloton embraced a Windows experience with folders, tabs, grids, and right-click menus. The Windows look was familiar to our clients and helped new users get quickly started in the application.

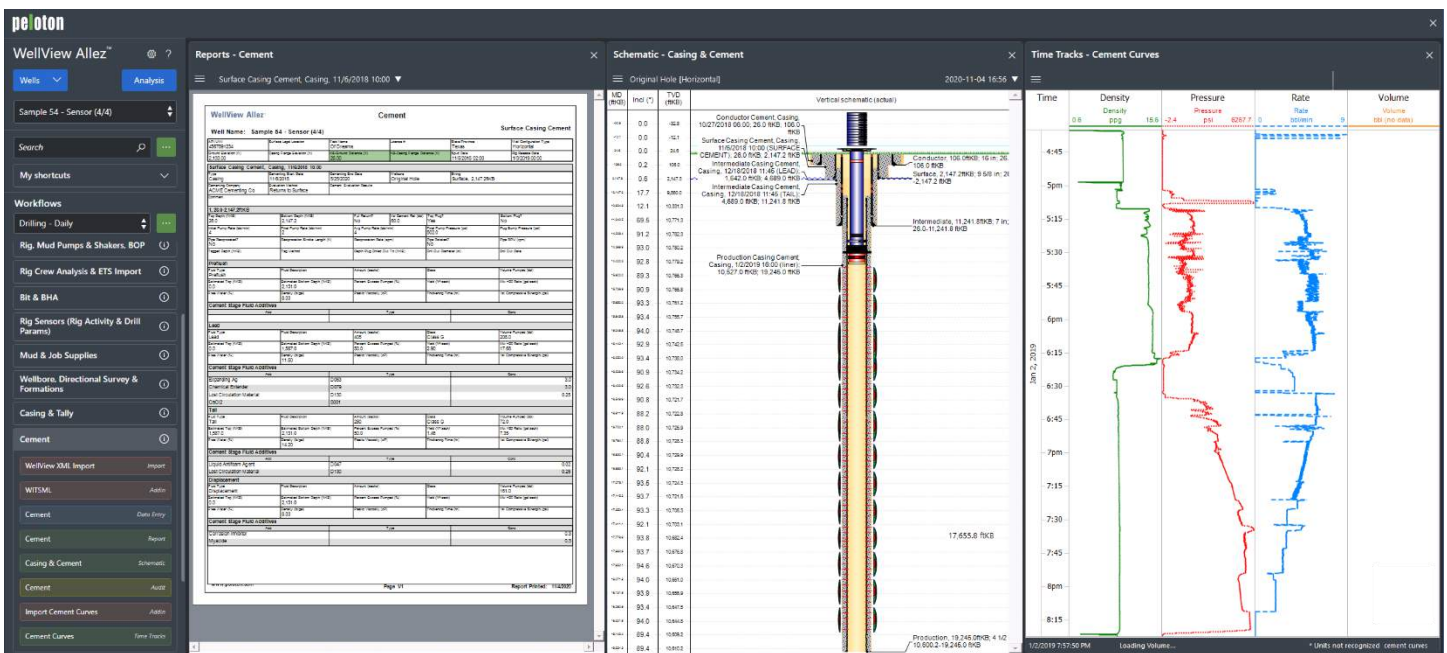

WellView Allez is an innovative and intuitive new interface. Multiple reports, schematics, and time tracks (or any combination) appear side by side. Think of it as your single well dashboard.

New Interface

An innovative and intuitive interface delivers a better user experience. Instead of clicking around and jumping into new windows, you can now display multiple reports, schematics, and time tracks side by side—providing a single well dashboard. All work takes place in the same interface.

“Game changer!”

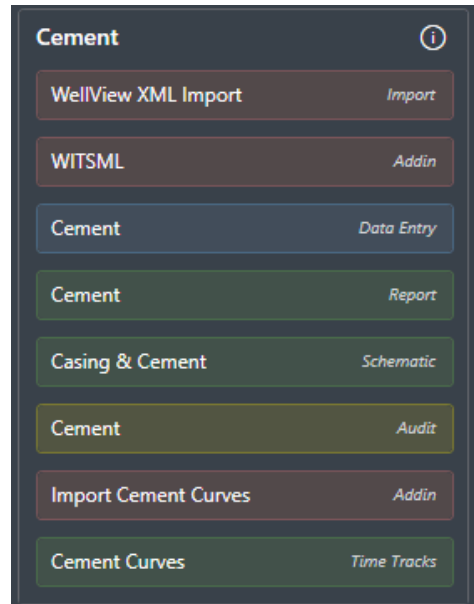

Based on your screen size, you can open as many templates as you like. Shortcut your favorites. No more jumping tab to tab or folder to folder.

Workflows

Workflows are the heart of WellView Allez. They guide users through imports, data entry, and QC. You can group relevant templates together to help you enter and audit your data.

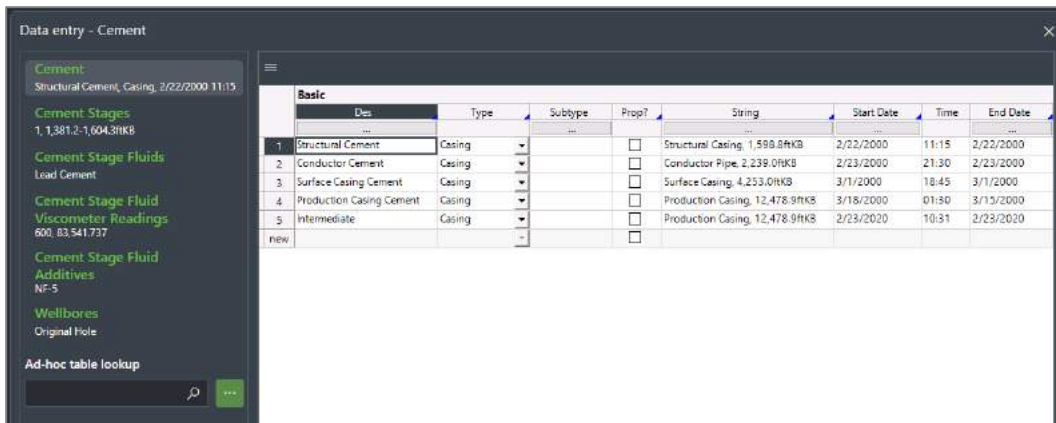

WellView Allez comes with a list of standard workflows, and your administrator can customize workflows for your company.

“The workflows are awesome! We had no idea we could load so much data directly into WellView.”

Data Entry Forms

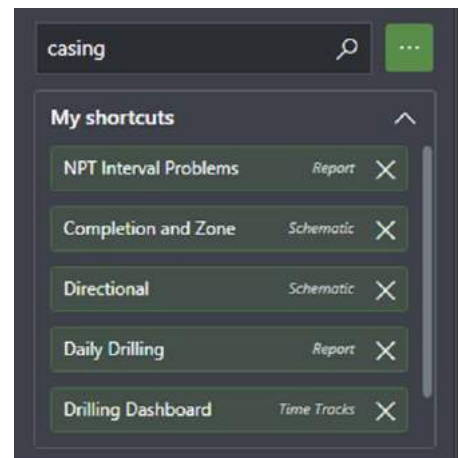

Use guided forms to step through data entry. No more separate Edit Data window!

“Love it!”

Search and Shortcuts

Search for available templates for reports and schematics and add the results to a shortcuts list. No more hunting through folders to find relevant reports!

User Experience

Use a desktop computer, laptop, or tablet to log into WellView Allez in the Peloton Platform. Disconnected field users can run WellView Allez standalone at the field or rig site.

WellView Allez is officially released and available for all of our Peloton Platform clients. Contact your Peloton representative for details.

"I can't wait!"
